WATER AND ENVIRONMENT JOINT SECTOR REVIEW, 18th-20th 2018

BRIEF: Introduction:

Initially, regional structures of the Ministry of Water and Environment called Umbrella Organizations were established to support operation and maintenance of piped water supply schemes in small towns and rural growth centres, they were mandated to support all piped water schemes, urban or rural.

Under the reforms, umbrella organizations have been gazetted as Water Authorities to directly manage different water supply systems that were previously under local government management. Umbrella organizations have now taken over management of most of the water supply systems across the country, but for systems still under local government management, umbrella organizations are still providing O&M support.

Central Umbrella Organization was gazetted into Water Authority in August 2017 to carry out direct management of the small towns. This means that CUWS can now contract and supervise local scheme operators and financial

No of towns in central region with piped water systems:

No	Operator	No	Operational towns	Under construction / Feasibility	Distribution network	Customers Served	Total Population served	Unserviced Population
02	No. Towns under cUWS	129	103	26	2,788km	23,547	1,097,974	2.1 million

Challenges

- Aging infrastructure-some piped water systems have surpassed their design period which has escalated high water losses hence need for total overhaul
- High demand for water services in different communities. Hence need to expand systems to other unserved areas.
- Poor sanitation standards on the islands of Kalangala district. There is need to construct user friendly public sanitation facilities on all islands in Kalangala district

management handled at the regional level, using computerized billing, accounting and revenue collection systems. The Local communities and local government now are represented in the local Water and Sanitation Committee which carries out a monitoring role.

Currently Central Umbrella of Water and Sanitation Authority (CUWSA) has 89 systems (August 2018) which includes both Small Towns and Rural Growth Centres. This new model of management has had improvements in operations especially restored functionality in a number of schemes, higher collection efficiency, reduction in non-revenue water and increased number of customers through extensions. Other initiatives have also been done under the management model like Performance data available online through the Utility Performance Monitoring Information System (UPMIS) system and Revolving Fund being launched to finance investments. It is foreseen that CUWSA will be sustainable and able to extend clean and safe water to every village and every household in the central parts of the country. Affordable services will also be realized as a result of improved efficiency and also regulated and manageable tariffs.

PICTORIAL:

Central umbrella has been supported with pipes and fittings for extensions and connections, works have commenced in some gazetted towns

Capacity Building for scheme staff on utility management model

Improved sanitation and hygiene standards in different towns. This has been through conducting regular sanitation surveys as well as providing Cesspool emptier services to individual households and institutions.
